

## “DMX - RGB System” Kit Installation Example

### □DMX□ system

The scheme shows how to make High Brightness lighting systems with changeable light color. By using our "RGBOX31" driver, you can connect up to 9 TRIOColor spots or up to 2 U115RGB. As an alternative to TRIOColor spots, you can use TRIOAmbient spots. Parallel connection of max. 25 "RGBOX31" drivers can all be controlled by the DMX-PWM interface, type DMX1, and by the signal DMX512 produced by the DMXC general controller.
